Other Missions	Various Instruments	Archive (L2+)	PO DAAC			69	
		Distribution	PO DAAC	NA	NA	184	K

Notes:

A. Represents regular forward production only. No reprocessing was done, since current phase of major reprocessing was completed on June 20.

B. The actual L0 data rate from AMSR-E is 6.6 GB/week. This is lower than ESDIS baseline requirement. Updating of the baselined requirements is in process. L1 products are processed in Japan and sent to the US.

C. Includes forward processing of current data (October 17 - 23). A major reprocessing for the June 2002 - February 2004 data is completed. A subset of product is being reprocessed from March – May 2004 because of algorithm changes made to those products in May 2004.

D. Data from this instrument is not transmitted to DAAC daily.

E. Volumes of ASTER L1A and L1B products are a function of production at ERSDAC in Japan. L1A and L1B volumes include the expedited data sets generated at LP DAAC. ASTER L2 products are produced on demand, and the actual volumes may be significantly different from requirements. In June 2003, LPDAAC started to generate L1B products from L1A ingested. The total archive volume includes L1B products generated at LP DAAC.

F. Includes forward and reprocessing.

G. Distribution requirements represent the delivered capacity for distribution. Because distribution is based on user orders, the actual distribution volumes may be significantly different from the available capacity.

H. Since November 19, 2003, GLAS laser operates during intermittent observing periods to conserve laser power. Only the raw data product is delivered on a daily basis to the DAAC.

I. Archival volumes for MOPII L1-L2 at LaRC products are dependent on MOPITT SIPS production schedule.

J. Distribution requirements are weekly averages of media distribution volumes based on subscriptions for a full year.

K. Includes distribution of educational materials.

L. Actual volume does not include the MODIS ocean color products processed at SeaDAS (SeaWIFS Data Analysis System).

M. Very little or no reprocessing was done.

N. Does not include the distribution by data pool.

O. Currently distribution of ADEOS-II data is limited to the instrument team members for calibration/validation purposes.

P. Ingest/archival of MODIS L2+ products are dependent on MODAPS processing schedule. Values reported here represent what have been archived at DAACs. MODAPS production volume could be different.

Q. No information is available.

R. Total amount of data distributed through Data Pool. Due to unavailability of user characteristics information, further breakdown by user category (e.g., data producers, end users) is not possible at this time.

S. No or very little higher level (L2+) product has been generated yet.

T. TES instrument is experiencing filter wheel anomalies and no data has been collected.

* Baseline requirements refer to the May 2003 EOSDIS technical baseline. The QA requirements for distribution are the Level 2 requirements based on inputs from instrument teams (ITs). The requirements multipliers are ramp-up factors to account for forward processing and reprocessing. They varies, depending on processing level and launch date. Ramp-up factors used in this table are:

Processing Level	1st year after launch	2nd year	Launch+2 or more year
L0	1	1	1
L1A	1	2	3
L1B	1.015	2x1.015	3x1.015

L2-4	0.5*1.015	1.5*1.015	3*1.015

Please note that browse data volumes for L1B-L4 products are assumed to be 1.5% of product volumes.
